

## Premier Dental launches new Premier Retraction Caps for better gingival retraction and to aid hemostasis

Premier Dental Products Company introduces new Premier Retraction Caps. The retraction caps are hollow cotton caps designed to enhance gingival retraction and assist hemostasis. Premier Retraction Caps work synergistically with Traxodent™ Hemodent™ Paste Retraction System. As the patient bites down, the cap gently guides Traxodent's soft paste into the sulcus for maximum tissue deflection. With Traxodent, hemostasis is quickly achieved from the combined action of the hemostatic agent, aluminum chloride along with the compression generated from the cap. The caps are available in three sizes, size 5 (large), size 3 (medium), size 1 (small) to accommodate different size crown preps.

## Improve dental and facial development for growing children.

Mouth breathing, tongue thrusting, incorrect swallowing and other myofunctional habits cause MALOCCLUSION and POOR FACIAL DEVELOPMENT. Research has proven the T4K™ can effectively develop arch form and alleviate crowding by correcting these habits. **Used by Orthodontists and Dentists in over 90 countries.**

Pre-Orthodontic Trainer for Kids™ (T4K™)
