

SEEN AND HEARD

“For the FDI meeting, our objective has been to speak with as many dentists as possible to make them aware of properties that the microbrush applicator has. This way, their work will be easier. We have been stressing to them here at the meeting, for example, that Microbrush® X™ is an excellent applicator for the placing of bonding agents in the fiber post procedure. We are giving a sample out at the booth, which has been well accepted by the dentists. We are also talking about micro-Stix™. micro-Stix™ is an adhesive-tipped applicator that helps in the process of placing veneers. We have also been giving out samples of this and the response by the dentist has been very good. We are very happy to be here.”

**- Mark Albanese,
Consultant, Microbrush**

Mark Albanese from Microbrush

“We are showing compressors for the production of compressed air in dentistry, both for the small practice and for big institutions that have up to hundred and even more dental chairs. That number is not a problem for our systems. This is a very good market and we are a well-developed brand. The dentists are very happy to see us at FDI.”
